Scouting a match

Laptop: _____ Scout: _____ Every match, in this order.

1. **Sign in** at **http://tealteam.local/** (or **http://10.101.0.1/**) and press **Start scouting**. Keep this tab open all day.
2. The page says **You are scouting** and the team number, with **Your next assignment** at the top. Find that robot on the field before the match starts: red or blue, and its number.
3. **Fill it in while the match runs.** Tap **+** each time it scores. What you type is kept as you go, so a reload loses nothing.
4. When the match ends, finish the notes and press **Save observation**. Then follow **Your next assignment** at the top.
5. **Check the chip in the header: Synced** means the server has it. **Offline · 1 held** means it is waiting on this laptop: **do not reload, click a link or close the tab** (the page will not come back until the server does), never clear the browser, tell the lead scout, and switch to paper.

If something is off

- **Wrong robot, or no assignment? Not your robot? Choose another**, or type the number in **Not in this match? Team number**. Tell the lead scout.
- **Declined** by the lead scout: read why, then press **Record it again**.
- **Missed the robot?** Tell the lead scout. Do not guess.
- **Server out of reach for a while?** Open **Server out of reach?**, press **Show the code**, and let the lead scout scan it.
- **App down?** The lead scout hands out paper sheets. Use one per robot per match.

✂ -
