Lead scout during matches

Lead laptop: _____ Sign in as the admin, then open **Lead Scout**.

Before the first match

1. **Lead Scout → Assignments.** Check that it says **N of N robots in upcoming matches have a scout**. If not, press **Hand out open robots**.
2. To change who watches a robot, tap the match, pick the scout and save. Nobody can have two robots in one match.

Every few matches

1. **Waiting for review** (on **Lead Scout**): open the oldest. Press **Approve and see the next**, or write **Why decline it?** and press **Decline**. The scout sees the reason and records it again. **Put back to waiting** undoes a mis-tap.
2. **Refused when sent**, if it shows: record each one against the right match, or dismiss it.
3. **Assignments → Rotation:** swap out a scout who has been on too long.
4. Back up to the USB stick after every qualification round (the runbook on the Pi).

When things change

- **Schedule changed: Match schedule**, import the new CSV (observations are kept), then **Assignments**. Open each match it lists as changed and save it, then **Hand out open robots**.
- **Fewer scouts: Hand out open robots** again. Our team's robot is left for last.
- **A scout's laptop is offline: Scan a tablet**, scan their code, then let them scan the receipt.
- **App down:** paper sheets. Note the time in the checklist, and type the sheets in afterwards with PAPER in *Rule incidents*.
