TealTeam on a Chromebook

Laptop: _____ Scout: _____ Do these in order.

1. Plug the USB-C Ethernet adapter into the Chromebook and the cable into the switch.
2. Turn **Wi-Fi off**: click the clock, click the Wi-Fi tile so it is grey. No hotspot, no Bluetooth tether.
3. Open Chrome and go to **http://tealteam.local/**. If it does not open, try **http://tealteam/**, then **http://10.101.0.1/**.
4. **Trust the server once:** open **http://tealteam.local/ca.crt** (it downloads). Go to `chrome://certificate-manager` → **Local certificates** → **Import**, pick **tealteam-ca.crt**, tick **Trust this certificate for identifying websites**. Then open **https://tealteam.local/**: no warning, a padlock.
5. Press Ctrl+D to bookmark the **https** address. Three dots → **Cast, save and share** → **Create shortcut** (tick **Open as window** if you like); right-click its icon → **Pin to shelf**.
6. **Clear old data from earlier events:** go to `chrome://settings/content/all`, search `tealteam`, delete its data (and any `10.101.0.1`).
7. **Sign in** with your name and the temporary password from the sign-in sheet, then change it at **Account**.
8. **Keep the screen on:** Settings → **Device** → **Power** → **While charging**: **Keep display on**. Leave the charger plugged in.
9. Open your scouting page once so the offline copy loads, then wait for your match.

If the page will not open: check the cable and adapter, that the switch has power, and that Wi-Fi is off. Tell the lead scout.
